

Hoglift 2 ground level lifting solutions

Operators Step by Step lifting guide

The unique **Hoglift 2** system enables units to be lifted onto vehicles without the operator leaving ground level, contributing to **Health and Safety**.

Hoglift 2 system has a reinforced steel cable which is permanently fixed at the top of the unit while the

opposite end has rings that are fastened to flat webbings for lifting.

We recommend using Flat Webbing Slings for carrying out lifting procedures. For safe working instructions, follow this simple step by step lifting guide.

1 Position & stabilize transporter rams

2 Attach Flat Webbing Sling to HIAB lifting hook

3 Release cable from behind securing plate

4 Attach slings to rear lifting hook, and repeat process for the front

5 Elevate unit and position at ground level

6 Remove deshackles from lifting hook and Slings
